

DHRUV KINGER

Cloud Solutions Architect | Senior Software Engineer | 3x Azure Certified

New Delhi, India • dhruvkinger@gmail.com • linkedin.com/in/dhruv-kinger • github.com/DhruvKinger

PROFESSIONAL SUMMARY

Innovative and forward-thinking Cloud Architect and Senior Software Engineer with nearly 6 years of experience designing, building, and deploying highly secure, resilient, and scalable cloud-native applications. A 3x Microsoft Azure certified systems architect with a proven record of migrating legacy databases to cloud environments, implementing secure hybrid identity networks (Azure AD B2C), and engineering automated DevOps CI/CD pipelines. Blends deep theoretical cloud design principles with practical backend engineering capabilities to architect infrastructures that align flawlessly with enterprise business objectives.

TECHNICAL EXPERTISE

Cloud & Security: Microsoft Azure, Azure SQL Database, Azure App Service, Azure Key Vault, Azure Storage Account, Azure AD B2C

Architecture & Design: Distributed Systems, Microservices, Security & Compliance, Scalability, High Availability

DevOps & Automation: Azure DevOps CI/CD Pipelines, TFS Migration, Infrastructure Automation, Windows Task Scheduler

Application Dev: C#, .NET Core, ASP.NET Core, Angular, Web API, ADO.NET, Entity Framework, SQL Server

PROFESSIONAL EXPERIENCE

ThrivePass – Senior Software Engineer (Cloud Integration & Development)

Jun 2022 – Present

- Architected, built, and hosted robust full-stack services for 3 core SaaS wellness platform solutions on Azure App Service, delivering secure employee health benefits to enterprise-scale clients.
- Designed and executed centralized cloud-identity solutions using Azure AD B2C to establish high-security, unified single sign-on (SSO) authentication topologies across all cross-platform projects.
- Optimized data persistence tiers by migrating relational workloads to Azure SQL Database, implementing secure connection patterns and secret-management architectures with Azure Key Vault.
- Leveraged Azure Storage Accounts for performant, distributed binary object processing and engineered background server tasks to manage cloud resource life cycles efficiently.
- Engineered and deployed responsive client portals using Angular, interfacing natively with enterprise-grade .NET APIs and microservices.

Aplos Global Ltd – Software Engineer (Systems & DevOps)

Sep 2020 – May 2022

- Drove the operational modernizing of version control and release infrastructure by leading a migration from legacy Team Foundation Server (TFS) repositories to Azure DevOps, defining unified CI/CD pipelines.
- Built and deployed background service applications running continuously via Windows Task Scheduler to securely ingest, process, and synchronize critical enterprise relational data streams.
- Designed, built, and maintained core functional modules (Attendance, Tax, Leave Processing, and Visitor Verification) within the company's enterprise ERP system.
- Developed and delivered a responsive, cross-platform mobile companion application in Xamarin.Forms, providing end-users with interactive, remote access to internal ERP controls.

- Acquired hands-on exposure working alongside core dev teams on hosting and scaling basic application layers.
- Applied backend development and relational querying fundamentals to deliver project modules on schedule.

PUBLICATIONS & ARCHITECTED PROJECTS

"Enterprise Application with Microsoft Cognitive Services Hosted in Azure" – Co-Author, TEST Engineering & Management

Published research highlighting architectural frameworks required to scale intelligence layers on Azure, utilizing cognitive API endpoints and managed services.

"Connecting Microsoft Azure Database with .NET Application" – C# Corner

Published a technical blueprint outlining recommended practices to securely bridge .NET application backends with hosted cloud-native relational databases like Azure SQL.

Social Media NLP & Sentiment Pipeline (Azure & Cognitive Services)

Designed an event-driven automation workflow utilizing Azure Logic Apps and Cognitive Services APIs to ingest, filter, and store processed sentiment metrics from stream-based external feeds.

Mobile Application for aPOP (Associated with Aplos Global Ltd)

Developed a highly integrated Xamarin.Forms mobile application that features mobile attendance validation, barcode processing on packaging cartons, and secure real-time leave submission APIs.

EDUCATION, CREDENTIALS & CERTIFICATIONS

Bachelor of Engineering in Computer Science

Chandigarh University, Punjab, India

Key Credentials:

3x Microsoft Azure Certified • MCT
